

Definition of Exhibit Shading

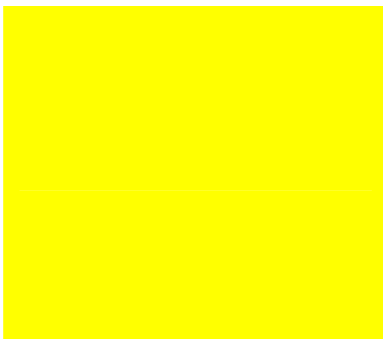

The information provided on the exhibits is based on a preliminary engineering study. The possible impacts shown are subject to change as the design is refined and more detailed information becomes available.

Red shading indicates buildings which appear to be impacted by the right of way required for the alternative represented. Impacted in this case means that the right of way as shown appears to be within the existing building line and if constructed may require removal or modification of the building.

Orange shading indicates buildings which appear to be nearly impacted by the proposed right of way for the alternative represented. Nearly Impacted in this case means that the right of way required for this alternative appears to be within 5 feet of the existing building line.

Yellow shading indicates parking or vehicle maneuvering areas which appear to be within the proposed right of way required for the alternative represented
